

Solar PV System

What are the benefits of Solar?

-  Save money on your energy bills - by generating your own free electricity you are protecting yourselves against rising energy costs
(For information on the FIT and SEG tariffs please contact your utility provider)
-  Reducing Carbon Footprint - solar panels are a clean and renewable energy source
-  The solar panels are made up of photovoltaic cells which capture the sun's energy and in turn convert it to electricity. An inverter converts the solar electricity to the voltage used in the house
-  Solar panels have a lifespan of typically 25 years with very little maintenance

Why choose Clearline fusion?

-  Aesthetics - roof integrated panels sit lower to the roofline, without brackets and racking on show, to look like an intended part of the roof
-  Roof Maintenance - the roof covering can be easily maintained or replaced without the cost of dismantling the solar installation. Problems associated with bird infestation are avoided
-  Simple - fusion achieves exceptional fire performance, wind resistance and weather tightness with our extra roof battens. Everything is there in the kit
-  Robust- certified wind resistance is more than four times higher than competitor products
-  For every solar panel that is installed on a roof we will plant a tree with our Fusion Forest Programme
